Company Profile

DEEPCYBER

Advanced Intelligence, Protection, Antifraud.

Cyber Boutique Company

DeepCyber is a "cyber boutique company" which was founded in late 2016 and took off in February 2017. Driven by an idea shared by 3 partners with experience in the Cyber sector, it is coordinated by CEO Gerardo Costabile.

The primary purpose of the founders was to create a company that was somehow unique, exploiting the team's diverse experience mix to sustain an imaginative managerial, international and independent approach endowed with profound technical, solution-driven and pragmatic expertise.

DeepCyber helps its clients to enhance the effectiveness of their Cyber threat defence systems according to an intelligence-driven paradigm.

The DeepCyber expert team, supports its customers in a process of development of their in-house proactive detection & response capabilities to enhance their Cyber Threat Intelligence, Protection (intended as an evolution of security to protect tangible and intangible assets) and Anti-fraud strategies.

DEEPCYBER

Advanced Intelligence, Protection, Antifraud.

OUR VALUES

Innovation

DeepCyber supports its customers in an innovative way, offering an approache based on Maturity Model and using Data Fusion processes, selecting state-of-the-art technologies to implement Cyber Threat Intelligence, Cyber Defence and Antifraud protection.

Across-the-Board

DeepCyber supports customers by offering the highest level of effective and powerful protection. To this end, protection is not simply modelled as a shield deployed to protect against "attacks". It is implemented in a fully comprehensive manner "across-the-board" with defences activated at all levels and from all angles.

Productivity

DeepCyber supports its customers proactively through the use of innovative "Cyber Threat Intelligence" platforms and "Diversified Information Sources" (feeds), capable of identifying current and future threats. The protection of assets from cyber threats and fraud must be proactive and intelligence-driven.

Elegance

DeepCyber believes that style playes an intrinsic role in protecting tangible and intangible assets.
Elegance is also style, self-restraint without exhibitionism or narcissism. And this also means discretion and substance.
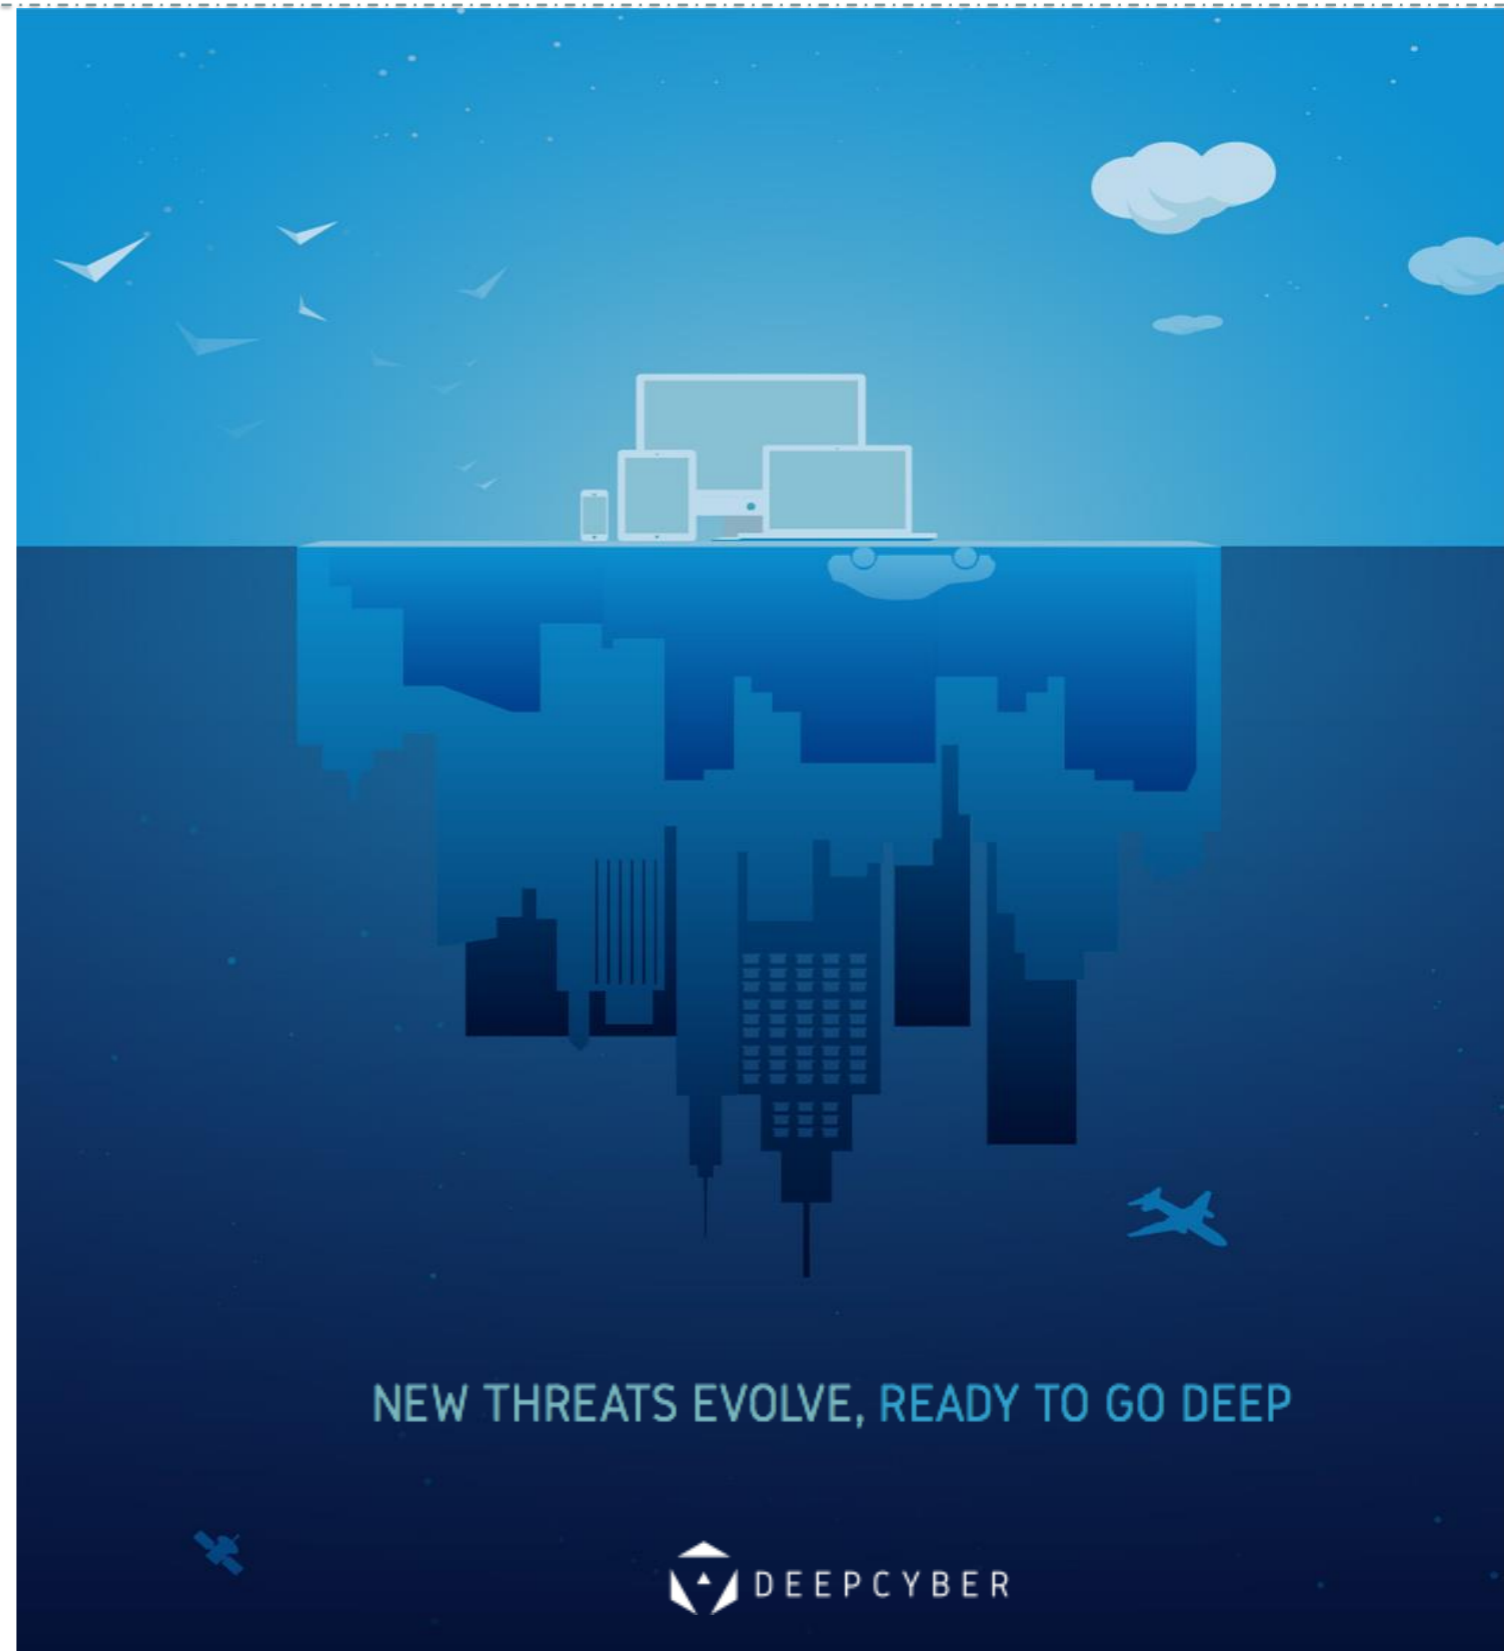

Protection

DeepCyber applies best practices to support its customers in identifying and protecting themselves against cyber threats from various sources. The goal of DeepCyber is to offer the best protection possible by sharing its "agnostic" approach with their clients, thus ensuring maximum effectiveness. DeepCyber prefers to use the word "Protection" rather than the word "Security".

Mission

We coined the slogan **"New Threats Evolve, Ready To Go Deep"** to mark DeepCyber's launch and it accurately projects our identity. We are accustomed to a superficial image of IT and computer networks, but myriad rogue technologies and threats lurk beneath that surface.

DeepCyber's mission is to create and generate value for companies, not just with the mere identification of cyber threats from the surface, deep and dark webs, but by accompanying the customer in the management of threats, with a modus operandi that is design and protection oriented, also exploiting its network of international partnerships based in different countries such as the USA, China, Russia, Israel and Europe as well as Italy.

NEW THREATS EVOLVE, READY TO GO DEEP

DEEPCYBER

OUR SERVICES

Our three key action areas are:

Cyber Intelligence	Protection Understood as that evolution of security focused on protecting tangible and intangible assets	Antifraud

1. Cyber Threat Intelligence

Custom Cyber Threat Monitoring Services

A service offering customised monitoring on the main threats from the surface, deep and dark webs based on customer reputation levels.

Cyber Threat Intelligence Feed & Platform

Support service for the acquisition and use of Cyber Threat Intelligence feeds and platforms.

Cyber Threat Report

Reporting service on a monthly or quarterly basis on the main threats on the surface, deep and dark webs.

Cyber Threat Hunting

A customer support service which deploys a specialised Cyber Threat Hunting team to improve the integration of Cyber Threats with the SOC. Support for the continuous management of Intelligence information, through validation and periodic reporting of actual threats.

Bitcoin Intelligence

Monthly support and reporting related to money transfers from bank accounts to Wallets and Exchange Platforms using Cryptocurrencies (Bitcoin, Litecoin, Ethereum).

deepcyber.it

2. Protection

Data Protection

Data Protection Assessment Service, Data Breach Investigation - Risk & Vulnerability Analysis, DPIA, and support for GDPR regulatory compliance

Brand Protection Intelligence

A service for the collection, identification and analysis of information from various sources on the web and the deep & dark webs, to determine if a site is hostile or fake. Report generation. Monitoring and recommendations

Forensic IT and Incident Response

A data analysis service which uses forensic meths and provides Incident Response support

Reputation Intelligence

A service for the research and analysis of third party entities in matters of regulatory compliance e.g. anti-corruption, AML, digital risk and business risk

Data Encryption

Distributor of encrypted devices (with Pins or Biometrics) providing data protection in GDPR contexts

Attack and Phishing Simulator

Advanced training services for the prevention, identification and management of Cyber threats and Anti-Fraud, trought latest-generation "simulators" of cyber attacks or supervised phishing campaigns

3. Anti-fraud

Anti-Fraud System

A support service for the acquisition of anti-fraud platforms

Fraud Risk Management

Planning and implementation of the Enterprise Risk and Integrated Control Analytics (ERICA) system

Artificial Intelligence & Machine Learning

Design service for algorithms and anti-fraud systems through the use of AI/Machine Learning technologies
